

August 12, 2025: Julie Beagle, U.S. Army Corps of Engineers & USGS scientists Jessie Lacy, Karen Thorne, and Susan De La Cruz. Feeding sediment to grow tidal marsh - the Eden Landing Strategic Placement Project

Information Shared in Meeting Chat Not Discussed in Video

- Noah Hume: Anyone know the draft of the smaller sediment scows when loaded?
 - Julie Beagle: Noah – I'm not sure about the 300 cy scows, but the 1600 CY were light loaded, and drafted about 6-9 feet.
- Jim Hobbs: I could use detailed lat-lon on where this was. I'm otter trawling this area for the WRMP
 - Julie Beagle: Jim, we can share the placement location in whatever form you'd like :)
 - Jim Hobbs: if you have a shapefile that would be great
 - Julie Beagle: 👍
- Karen Thorne, USGS : Yes, the cm/yr is correct. Accretion is very high at the marsh. Greatly outpacing SLR
 - Tanya Graham (AECOM): ❤️
- Molly Ferrell: Thanks for sharing on this cool, informative study!
